

This startup is a small venture focusing on the upcycling of old clothes into reusable bags.

This small business cum startup was founded in 2021 by creative artist Ms. Aditi Agarwal. Spending years working in the art and craft industry, Aditi came up with the idea of collaborating with her colleagues who are in the recreational field on upcycling of old clothes and sarees into reusable bags. She believes to create a sustainable and eco-friendly environment and reduce the pollution through plastic bags by replacing it with a new concept of upcycled repurposed bags.

New Environmental
Upsizing concept Better
Ideas Re-manufacturing Useful
Value Material growth success
Repurpose UPCYCLING creative
Design process second-hand

fascination with technology.
green ideas.

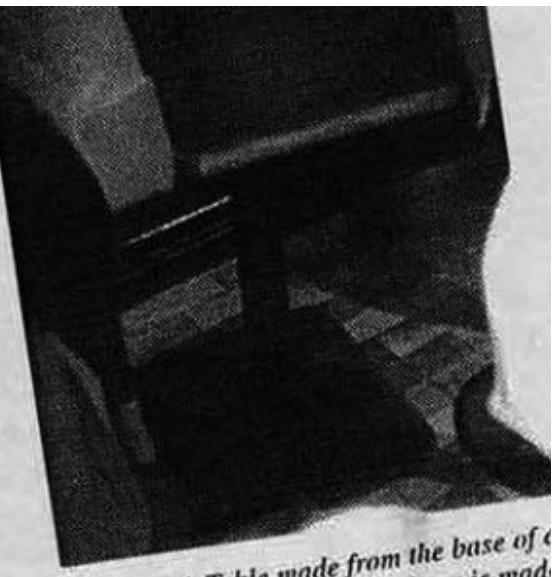

We talked about the impending EU Demolition Waste Streams directive. "Recycling," he said, "I call it down-cycling. They smash bricks, they smash everything. What we need is up-cycling, where old products are given more value, not less." He despairs of the German situation and recalls the supply of a large quantity of reclaimed woodblock from an English supplier for a contract in Nuremberg, while just down the road a load of similar block was scrapped. In the road outside his premises was the result of the German's demolition 'waste' recycling. It was a pinky looking aggregate with pieces of handmade brick, old tiles, and discernible parts of useful old items mixed with crushed concrete. Is this the future for Europe?
